INFECTIOUS DISEASE One Step HCV (Hepatitis C) Tests

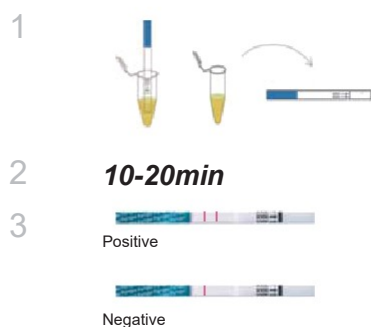

One step HCV test kits are designed for qualitative determination of antibodies to Hepatitis C Virus (anti-HCV) in human serum, plasma or whole blood, as an aid in the diagnosis of hepatitis C infection. The test is based on the principle of double antigen sandwich immunoassay where purified recombinant antigens are employed to identify anti-HCV with high sensitivity and specificity.

Features

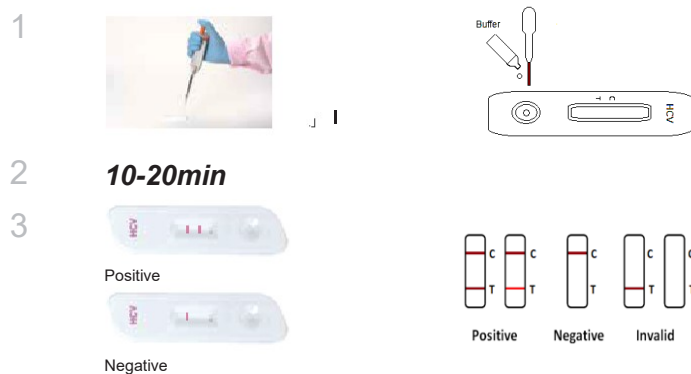

1. Takes less than 10-20 minutes to be sure;
2. Sensitivity: 98.5%; Specificity: 99.0%
3. Qualitative results are read visually without any instrument.
4. Easy to handle.
